White paper of Tools Chain

I、Development status of Block chain

As an international universal technology, block chain is accelerating the innovative integration with various industries from the field of digital money, which gives new kinetic energy to the new round of development of various industries. The decentralized distributed account database of revolutionary innovation will realize the iterative upgrading from the information Internet to the value Internet, and gradually become an indispensable part of the scientific and technological world in the future.

Block-chain technology has brought great changes to the time of the digital economy.

This kind of upheaval has occurred twice in the history of the Internet. The first great change is the global networking. Since the birth of Apache in 1969, the mainstream countries in the world have gradually connected to the Internet, opening up the journey of global networking. The second great change is a global application. In 1989, the World wide Web paper came out, and the Internet application bloomed in an all-round way, which realized the global application explosion.

The third major change is brewing. The birth of Bitcoin in 2009 was an iconic event. With block chain technical support, Bitcoin broke the black box of traditional banknotes. The circulation of physical paper is invisible, and no one will record where a note comes from, while the block chain makes every move of digital money clear and protects the privacy of participants.

The significance of block chain is to build a more reliable Internet system to fundamentally solve the fraud and rent-seeking phenomenon in value exchange and transfer. More and more people believe that with the popularity of block chain technology, the digital economy will be more authentic, and the economy and society will become more just and transparent.

Some people have planned the block chain economy as three levels: technical ecosystem, certified economic ecosystem and community autonomous ecosystem. In a broad sense, the block chain ecology we are building is basically established according to the theory of community self-organization. Block chain technology is a paradigm shift of subversive technology, and block chain economy is an evolution based on individual economic thinking paradigm. This kind of organizational management is neither a top-down centralized operation model, nor a bottom-up unsupervised state. In fact, it is a kind of consensus autonomy reached by users and residents in community ecology. In a

narrow sense, block chains Economy is an economic principle and theory that focuses on supporting block chains and their derivative applications.

According to the data of virtual currency data platform feixiaohao , 2,539 virtual currency items are included as of current. On June 18, 2019, the global social giant facebook released the encrypted currency project Libra white paper. Since then, the global Internet giant, the technology giant, has basically participated in the block chain technology competition. With the development of block chain technology, we have reason to believe that more enterprises will start to use block chain technology, and more block chain projects will be born.

II、 Tools Chain- Block chain Cloud Technology Service platform

Tools Chain' s vision is to become a world-class block-chain cloud technology service platform.

Tools Chain is designed to "develop a platform that serves users as users think." tools Chain provides mature solutions or application tools to help block chain entrepreneurial teams and any other groups or individuals in need of block chain technology quickly and efficiently solve problems and obstacles encountered outside their own profession, thereby making them more focused on their unique, high-value-added

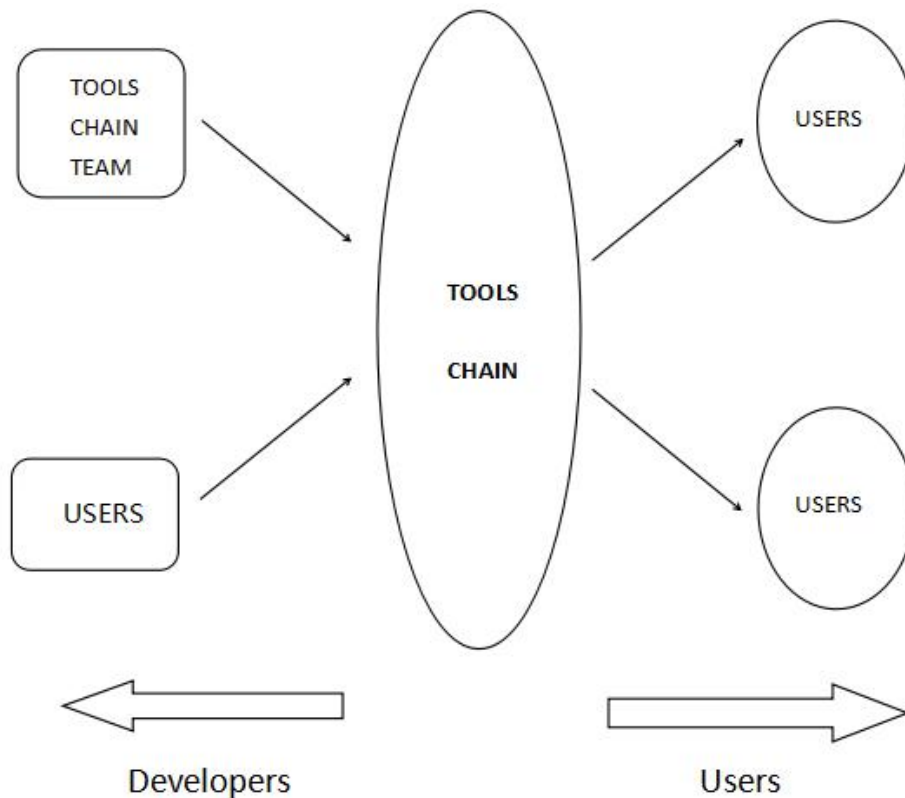

business application development. Get faster and more returns with less effort.

Tools Chain as a cloud platform, with the exception of official development of its products and services, all block chain practitioners around the world can share their own products to serve other developers or users. You can also ask for help through Tools Chain to meet your own needs.

The goal of Tools Chain is to be the promoter of block chain technology and the leader of technological innovation. Build a "road and infrastructure" to better serve the public in the world of block chains to help Tools Chain users solve problems more quickly and effectively.

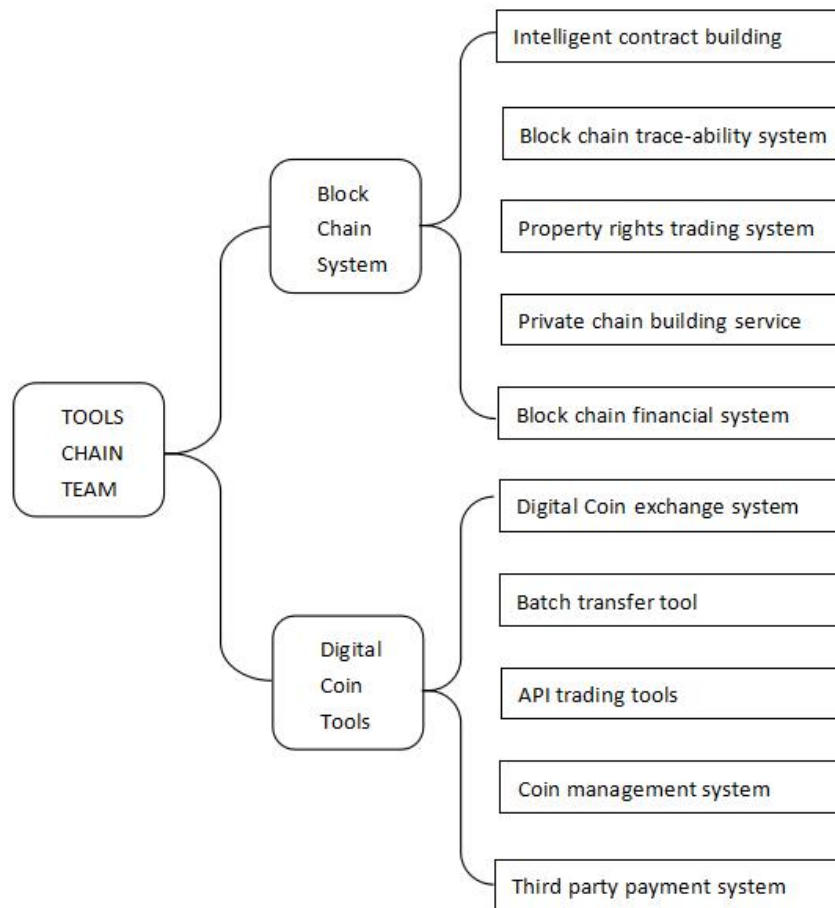

III、 Tools Chain Ecosystem

Tools Chain ecosystem will be divided into two categories according to developers, primary products and fuel products.

Picture1 The ecosystem of Tools Chain

1、 The original products are products and services provided by the official technical team of Tools Chain. The original products are the source of the ecological power of Tools Chain. The technical teams of Tools Chain are all senior code farmers. Through the observation and analysis of the industry, the team initially provides the original block chain basic commercial system and digital money application tools. With the development of the industry, the team will continuously provide better products and services.

Picture2 The original products of Tools Chain

2、Fuel products refer to the products and services generated by Tools Chain users themselves. Fuel products are an inexhaustible driving force for the sustained, healthy and steady development of Tools Chain ecology. Tools Chain provides a platform for global outstanding developers to share communication and display. Developers can obtain Tools Chain ecological fuel tools in return by sharing original applications, while using tools to buy products and services provided by others.

In order to ensure that all displayed products are high-quality, safe and reliable, ToolsChain has set up an independent decentralized on-shelf audit system, and the products shared by community users

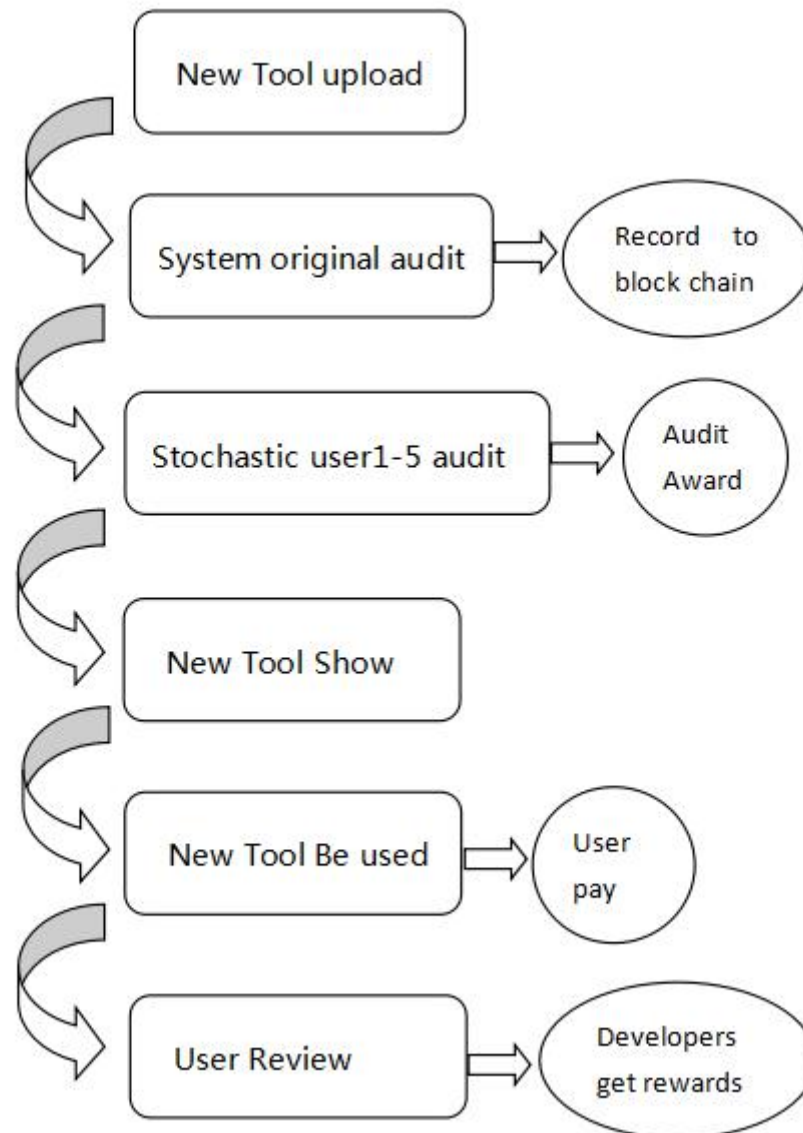

need to be displayed after being reviewed.

Developer: upload the application (obtain the original audit of the gas), system, the audit passes the chain, and is recorded as the only author

Other participants in the ecosystem: review the new application (to get the gas)

Users of applications: use and evaluation (expense gas, developers are rewarded)

Any user in the Tools Chain ecosystem can be both a developer and a user.

Picture3 Independent decentralized shelf audit system

IV、Tools Chain Gas

Tools is the general gas of Tools Chain ecosystem, it's developed based on EthereumERC20 standard. The total amount is constant to 1024000000, and never issue more.

Classification	Amount	Quantity
Cornerstone investment	10%	102,400,000
Launchpad	10%	102,400,000
Core team	10%	102,400,000
Ecological construction	70%	716,800,000

For the long-term and positive development of Tools Chain ecology, 716800000 Tools are reserved as ecological construction incentives, mainly for developers and audit incentives for new applications, and the number of incentives will decrease year by year with the passage of time.

V、Tools Chain development plan

Like blockchain technology, the Tools Chain team is very young and hopes to contribute to the development of blockchain technology through their own efforts. Block chain is the fourth industrial revolution after Internet technology. A small step in the team may be a big step in blockchain technology, and we look forward to it together.

Based on the Tools Chain, team has set up a professional blockchain service company to help more industries decentralized, blockchain, at the same time, the team will combine different industry needs, build

more DAPPS, to provide more partners with high quality block chain services.

VI、 Tools Chain Team

As a technology-driven block chain project, Tools Chain team has a strong pool of technical personnel, team technical members have the working background of internationally renowned technology companies, the main members are introduced as follows:

Michael, founder , Bianxi Capital partner, Research on the technology and application of block chain and digital money from 2015, and has been involved in a number of block chain start-ups in the form of a chief consultant.

Kevin , CEO, Since 2014, he has been working in the field of market operation. In 2017, he started his own business and explored the combination of block chains and the Internet.

Summer ,COO ,a senior partner of a well-known exchange.Engaged in the field of high net worth investment for many years and he has a more in-depth study of the capital and financial markets.

Rock , CTO, senior big data engineer, engaged in cloud computing、AI technology research and development for many years;

Aaron , co-CTO, senior block chain engineer, research-loving Niu Kid, China block chain V God, has been involved in the research and

development of many well-known block chain projects.

VII、 Disclaimer

This document is for the purpose of communicating information only, and the contents of the document are for reference only and do not constitute any proposal for the sale of stocks or securities, abetting or soliciting. Tools, as gas, of the Tools Chain ecosystem, do not fall into the following categories:

A, any kind of currency; b, securities; c, equity in legal entities; d, stocks, securities, bills, warrants, certificates or other instruments subject to any rights.

The contents of this document shall not be interpreted as compulsory participation in private placement activities. Participation in private placement pre-sale represents that the participants have reached the age standard, have complete civil capacity, participate in and have a detailed understanding of the project. Tools Chain team ensures that the information in this white paper is true and accurate, and the project will be updated during the development process, including, but not limited to, the operation mechanism, digital assets and their allocation mechanisms. The content of the document may be adjusted in the new white paper as the project progresses. The team will issue the latest version of the white paper in a timely manner through official website

announcements and so on. Participants are requested to obtain the new white paper in a timely manner. Book, and adjust the corresponding decision according to the updated content in time.

Blockchain and digital assets are greatly affected by market trends and policies., Tools Chain teams will spare no effort to achieve the goals mentioned in the document, but the, Tools Chain team based on force majeure cannot fully complete the commitment. The team made it clear that it would not bear the loss caused by: reliance on the content of this document; inaccurate information in this article; and any behavior caused by this article. Whether or not the added value of tools depends on the law and the needs after landing, the team does not make any commitment to the added value of Tools and is not responsible for the consequences of its diminishing value. . The team follows any regulatory regulations conducive to the development of the block chain industry, as well as industry self-regulatory statements. Tools Chain team clearly expresses to participants the possible risks, once involved in the project private placement pre-sale activities, on behalf of the participants have confirmed their understanding and approval of the instructions, accept the potential risks and consequences of the project.
